

BarDIMM® Light

Business Partner

If your business needs barcode printing capabilities, but you don't want to invest a lot of money in dedicated barcode printing hardware, the Capella Technologies BarDIMM Light module is the solution for you. The BarDIMM Light module is the affordable and easy way to add barcode printing capabilities to your existing or new HP LaserJet printers and MFPs.

Easy to Install, Easy to Use

Forget about complicated set-up and installation procedures. Simply plug the BarDIMM Light module into any available DIMM or CF socket in a compatible HP LaserJet printer or MFP, and you'll instantly have the ability to produce the most popular barcode formats on a variety of media. For maximum return on your hardware investment, your printer or MFP will also retain the ability to support all of your usual printing functions.

Flexible

The barcodes generated by the BarDIMM Light can be printed in almost any size or rotation at a variety of bar widths and heights. Likewise, text values of various sizes and styles can be embedded in the bars, half-embedded, or printed above or below the bars. The high-quality output of today's LaserJet printers and MFPs ensures that these barcodes can be easily read by standard OCR products.

Efficient

Unlike traditional barcode add-ons, which merely add fonts to your printing device, the BarDIMM Light module actually leverages the power of your LaserJet printer or MFP by extending the PCL language. Barcode formatting, error detection and checksum applications are all performed at the printer, reducing the load on the host system and the network. The result is an affordable barcode solution that makes efficient use of your printer investment while providing the most popular barcodes used by businesses today. For more information, contact your Capella Technologies representative.

Supported BarDIMM Light Barcodes:

Code 39
 Code 39 Extended
 UPC-A
 UPC-E
 EAN-8
 EAN-13
 EAN 8 with supplemental 2 and 5 digits
